

INSTALL ONCE PER PROJECT

```
$ npx skills add DavidBatoDev/fmad-method
```

1. Pick your coding tool and skills. Include `fmad`, `fmod-method`, `fmod-core-tools` (or take them all).
2. Open the tool in the project and say **"fmad setup"**. It creates `_fmad/` (config and scripts, commit it).
3. Documents land in `_fmad-output/`, inside the active initiative's folder when one is set.

Three commands to remember

- `/fmad` "What should I do next?" It inspects the project and recommends a skill.
- `/fmad-build` Turn a change into reviewed, verified code.
- `fmad status` Versions and what to run next. Say **"fmad setup"** again to update.

Needs an AI coding tool with skills (Claude Code, Codex, Cursor, and others), `uv`, Node.js, and Git.

PICK YOUR PATH

New project

Small and clear: `/fmad-build <what you want>`

Clear, several sessions: spec → ticket → build per story → retrospective

Fuzzy idea: brainstorming or forge-idea → brief or PRD → UX and architecture → spec → tickets → builds

Hackathon: forge-idea → spec → build.
Run `fmad-project-context` early.

Existing, no docs

Don't write docs first. Build reads the code and matches its conventions.

1. `/fmad-project-context` "set up AGENTS.md"
2. Small change: `/fmad-build`. Bigger: spec → ticket → build. Design: `/fmad-architecture` from the codebase.
3. Repeated mistake: "record: ...". After big changes: "refresh".

Existing, with docs

1. `/fmad-project-context` "adopt our AGENTS.md". It keeps and improves what you have.
2. Feed docs to planning, not every build: `/fmad-spec` with sources (≤ 40 pages), PRD "update" or "validate", architecture from your doc.
3. Pin must-follow docs: `persistent_facts` in `_fmad/custom/<skill>.toml` (or ask `/fmad-customize`).

THE FOUNDRY CREW

Say **"talk to Ember"** (or run `/fmad-agent-analyst`), then type a menu code or just describe what you want. All five together: `/fmad-party-mode`.

AGENT	BRINGS	MENU CODES
Ember · analyst	Evidence-first discovery and research	<code>BP</code> brainstorm · <code>MR</code> market · <code>DR</code> domain · <code>TR</code> technical · <code>TS</code> tech selection · <code>CR</code> competitors · <code>UV</code> user voice · <code>CB</code> brief · <code>WB</code> PRFAQ · <code>PC</code> project context
Flint · PM	Jobs-to-be-done, sharp "why?" questions	<code>PRD</code> create, update, validate · <code>CC</code> correct course · <code>TK</code> tickets
Sienna · UX	User journeys, the screen before the code	<code>CU</code> create the UX design
Ferris · architect	Boring-on-purpose tech, trade-offs	<code>CA</code> architecture · <code>TK</code> tickets
Cinder · developer	Test-first, terse, precise	<code>BD</code> build · <code>QA</code> tests · <code>CR</code> code review · <code>ER</code> epic retrospective · <code>TK</code> tickets

TIPS

- **Unsure?** Ask `/fmad`, for example "I have an existing Next.js app, where should I start?"
- **Break a pattern on purpose:** say so in the `fmad-build` request. Otherwise Build matches what is already there.
- **Keep specs short:** give `fmad-spec` condensed sources, not a pile of raw documents.
- **Planning in the browser:** web bundles for Gemini Gems and ChatGPT GPTs are on the repo's Releases page.
- **Team vs. personal:** `_fmad/custom/*.toml` is shared (commit it); `*.user.toml` is personal (git-ignored).

HUB AND SETUP		
SKILL	WHAT IT CAN DO	SAY SOMETHING LIKE
fmad	Your guide: answers FMAD questions, recommends the next skill, runs setup, status, update, and repair, and manages the active initiative	"fmad setup" · "fmad status" · "what's next?"
fmad-project-context	Writes and maintains a small verified agent-instructions block in AGENTS.md: setup, adopt, refresh, record a pitfall, audit	"set up AGENTS.md" · "record: agents keep using npm"
fmad-customize	Writes overrides that change how any skill or agent behaves: facts, principles, menus, hooks	"customize fmad-build to run pnpm test"
EXPLORE AND RESEARCH		
fmad-brainstorming	Facilitated ideation drawing on 100+ creative techniques, with an HTML keepsake of the session	"help me brainstorm features for ..."
fmad-forge-idea	Pressure-tests a half-formed idea while personas probe its weak points, until it hardens or dies cheaply; can write a short brief	"forge this idea: ..."
fmad-deep-recon	Cited research for a decision: market, domain, technical, competitive, user voice, academic literature, or choosing between options. Runs it here, drafts a prompt for ChatGPT, Gemini, or Perplexity, or summarizes a report you bring	"research the market for ..." · "help me choose between A and B"
fmad-party-mode	A roundtable between the agents or custom personas, including focus-group panels	"party mode: should we build X?"
fmad-advanced-elicitation	Makes the AI critique and improve its last answer with 70+ methods such as Socratic questioning, first principles, pre-mortem, red team	"run a pre-mortem on that"
DEFINE		
fmad-product-brief	Creates, updates, or validates a product brief: the vision on a page or two	"create a product brief"
fmad-prfaq	Amazon's Working Backwards: writes the launch press release first, then answers hard customer and stakeholder questions	"work backwards on this idea"
fmad-prd	Creates, updates, or validates a PRD, with an HTML validation report	"create a PRD" · "validate the PRD"
fmad-spec	Condenses any input (idea, brief, PRD, transcript, notes) into a short spec that Build can execute; updates and validates specs	"distill this into a spec"
DESIGN		
fmad-ux	Captures the UX in DESIGN.md (how it looks) and EXPERIENCE.md (how it behaves)	"help me plan the UX"
fmad-architecture	Records the technical decisions that keep separately built parts consistent. Works from a spec, a raw idea, or an existing codebase	"create the architecture"
PLAN AND TRACK		
fmad-ticket	Slices initiatives into epics and epics into stories, writes and refines tickets, runs the board (publish, ready, move, assign, status) in the repo, GitHub, Jira, Linear, Notion, or Trello	"break this epic into stories" · "what's ready?"
BUILD		
fmad-build	The workhorse: clarifies, plans (you approve), implements, reviews with independent reviewers, verifies, presents. Accepts an issue or story link	"/fmad-build add dark mode"
fmad-build-auto	One unattended build iteration for automated loops, where an orchestrator hands each worker one ticket	invoke by name
fmad-qa-generate-e2e-tests	Generates API and end-to-end tests for features that already exist	"create QA automated tests for checkout"
REVIEW AND VERIFY		
fmad-code-review	Several independent reviewers check a change in parallel; findings are triaged before you see them	"run code review"
fmad-review	Review lenses for code or documents: adversarial, edge cases, verification gaps, structure, prose	"review this PRD adversarially"
fmad-walkthrough	Walks you through reviewing a commit, PR, file, or folder yourself	invoke by name
ADJUST AND LEARN		
fmad-correct-course	When a big change lands mid-build, assesses the impact on the PRD, epics, architecture, and UX and proposes the change	"correct course: the client dropped payments"
fmad-retrospective	Evidence-based review of a finished epic: sourced findings, action items, an acceptance decision	"let's retro the epic"
